

Tarun Kari

Customer Lifecycle Manager – CRM, CLV & AI-Driven Personalization

Berlin, Germany | Graduating October 2026 | +49 15560711688 | tarunkari0411@gmail.com | LinkedIn | GitHub

Education

International University of Applied Sciences

M.Sc. Data Science

Berlin, Germany

Oct. 2024 – Oct. 2026

- **Master's Thesis:** *Detecting ESG Score Deviations Through Textual Analysis: A Greenwashing Identification Framework* 2026 – Present

Python, SQL, XGBoost, Logistic Regression, FinBERT/VADER, SHAP, feature engineering, model comparison, reproducible evaluation, and explainable analysis across structured and textual data.

Experience

LTIMindtree

Software Engineer – CRM Data, Analytics & Automation

Bangalore, India

Jul. 2022 – Aug. 2024

- **Analyzed CRM, revenue and engagement data with Python/SQL to identify conversion, retention and repeat-interaction drivers;** defined lifecycle-style segments, funnel KPIs and cohort views that helped stakeholders prioritize customer and commercial process improvements.
- **Built reusable customer and revenue data models across CRM, APIs, databases and CSV/Excel inputs;** standardized customer IDs, lifecycle/status fields and timestamps, reconciled duplicates and source mismatches, and improved records passing agreed validation checks from 85% to 97%.
- **Translated business questions into customer-journey and KPI frameworks covering acquisition, onboarding, engagement, conversion and reactivation;** used Power BI/QuickSight dashboards and SQL drill-downs to explain performance clearly to technical and non-technical stakeholders and reduce recurring reporting turnaround by about 30%.
- **Automated CRM and lifecycle workflows with n8n, APIs, databases, Brevo and Lemlist for enrichment, routing, status synchronization, outreach triggers and exception handling;** reduced recurring manual operations effort by about 40% and extended the same patterns hands-on to Power Automate/RPA-style orchestration.
- **Explored predictive CRM and CLV-oriented modelling through propensity, churn, next-best-action and customer-value concepts;** used scikit-learn/XGBoost, feature engineering, calibration/error analysis and scenario reasoning to connect model outputs with measurable retention or revenue actions rather than model accuracy alone.
- **Evaluated GenAI and AI-assisted content/personalization workflows using LLM APIs, structured outputs and human-review guardrails;** worked cross-functionally with product, marketing/operations and engineering stakeholders using Agile/PM practices to scope experiments, resolve conflicting objectives and document scalable rollout decisions.

LTIMindtree

Software Engineer Intern – Data & Backend Applications

Bangalore, India

Mar. 2022 – Jun. 2022

- **Built Python/Java ingestion and transformation flows across REST APIs, SQL, MySQL, MongoDB and Pandas;** validated customer and operational fields, normalized incoming records and prepared reliable datasets for downstream reporting and application use.
- **Added JUnit, Postman, SQL and API-contract checks in Jenkins CI and documented expected-versus-actual behaviour;** learned to communicate defects concisely, verify fixes with stakeholders and favour simple, maintainable solutions over unnecessary complexity.

Projects

Message Notification Router | *Python, LLM APIs, Structured Outputs, PyTest*

2026 – Present

- **Built a lifecycle-style decision system that classifies free-form messages into notify, digest or mute using structured outputs, deterministic rules, confidence scores and evidence IDs;** treated each interaction as a measurable journey decision with explicit routing logic instead of opaque automation.
- **Created regression tests for malformed outputs, low-confidence decisions, rule conflicts and prompt-sensitive cases;** used traces, fallbacks and calibration-style checks to improve reliability, mirroring the guardrails needed for predictive CRM and AI-assisted personalization at scale.

Neukölln Delivery Agent | *Python, PostgreSQL, SQL, Gemini, Pandas, Streamlit*

2026 – Present

- **Built a natural-language analytics workflow that converts business questions into validated SQL and returns traceable operational metrics;** demonstrated how self-service analytics can translate ambiguous stakeholder questions into consistent KPIs without hiding the underlying data logic.
- **Added schema-aware validation, visible SQL inspection and deterministic checks before execution;** kept outputs auditable and explainable, reinforcing the same discipline required when using customer data for lifecycle decisions and management reporting.

Generative UI Self-Healing App Builder | *LangGraph, Claude, E2B, TypeScript, Puppeteer*

2026 – Present

- **Built an agentic workflow that turns user requirements into executable applications, evaluates rendered output and automatically repairs failures;** explicit generation, execution, evaluation and repair states make it possible to test scalable GenAI-assisted content and experience patterns rather than rely on one-shot generation.
- **Added structured-output/Zod validation, screenshot checks, failure taxonomies, a 30-second timeout and up to 5 repair iterations;** balanced personalization/automation potential against quality, latency and maintainability, reflecting a pragmatic approach to scaling AI-enabled customer experiences.

Technical Skills

CRM & Lifecycle: Customer Journey Mapping, CLV Concepts, CRM/Loyalty Analytics, Lifecycle Segmentation, Funnel/Cohort Analysis, Predictive CRM Concepts, Propensity/Churn Concepts, KPI Design, Personalization

Data & BI: Python, SQL, Pandas, scikit-learn, XGBoost, PostgreSQL/MySQL, Power BI, QuickSight, Data Modeling, Experiment/Performance Analysis, Stakeholder Reporting

Automation & AI: n8n, Power Automate – Hands-on Familiarity, RPA Concepts, LLM APIs, Structured Outputs, GenAI Content Workflows, Human Review, AI Evaluation

Delivery & Collaboration: Agile/Scrum, Project Planning, Cross-Functional Requirements, Management/Technical Communication, REST APIs, Git/GitHub, Jenkins, Docker, CI/CD | **Languages:** English – Fluent, German – A2
